

NEW BEDFORD

RADIATION THERAPY **Authorization Services**

Prior authorizations are rapidly becoming a source of more frustration among radiation oncologists and staff.

With New Bedford's authorization services, you've got an experienced partner owning the process to help maximize claim reimbursements with reliable and rapid turnaround.

No. 1

The Number One Way to Assure You'll Be Paid

Let your revenue cycle services begin before you provide treatment.

Securing prior authorization is the most effective way to assure payment, but payer requirements vary greatly and change often, making it time-consuming to keep up.

Further, if your billing service doesn't specialize in radiation therapy they're likely to be less effective than an internal resource.

We Know the Modalities and The Payers

At New Bedford, we've been focused on radiation oncology for over 25 years. The combined impact of our expert service teams and radiation therapy focus ensures that patients receive timely care and that you get paid fully.

We've worked with nearly every payer and specialize in the key modalities:

- ✓ Intensity Modulated Radiation Therapy (IMRT)
- ✓ 3D Conformal/ External Beam Radiation Therapy (EBRT)
- ✓ Brachytherapy
- ✓ Proton Beam Therapy
- ✓ Stereotactic Body Radiation Therapy (SBRT) and Stereotactic Radiosurgery (SRS)
- ✓ Intraoperative Radiation Therapy (IORT)

Try Our Complete Solution with Proven Results

New Bedford authorizes a complete episode of care and is not based on requests for individual procedures.

The episode of care includes all services rendered beginning with the initial CT simulation and ending with delivery of the last dose of radiation treatment.

If necessary, all procedures incidental to the delivery of radiation therapy (e.g., IGRT, special treatment procedures, and treatment planning) are included in the authorization.

EXPERIENCE

New Bedford has experience with all special consults and procedures, IGRT, and authorizing diagnostic radiology procedures ordered by a radiation oncologist.

Get Started Today With No Licensing Fees, Interface Fees, or Setup Fees.

We can work with any EMR or practice management system, but commonly use Aria, Mosaiq, and EPIC. We remotely access your clinical schedules, clinical treatment plans, and consult notes coupled with patient and payer information to determine which pending procedures require prior authorization.

If authorization is needed, we create the case, process the authorization, and notify your practice when it's received. If prior authorization is not needed or denied for any reason we provide notification of that as well and provide you with detailed appeal instructions.
